

VASUPALLI SAI HARI KIRAN

FULL STACK WEB DEVELOPER

Email: saiharikiran.vasu@gmail.com
Phone: +91 7780314837

ABOUT ME

Driven by a passion for innovation, web development has been my gateway to achieve this. I thrive on the excitement of continuous learning, eagerly expanding my knowledge each day. For me, being a developer is not just a career, it's a genuine pursuit of what I really love.

EXPERIENCE

Full Stack Web Developer

X-Verity | June 2023 – present (**1.2 YEARS**)

- Currently working as a Full Stack Web Developer, contributing to various challenging projects.
- Developed and executed solutions, continuously extended my technical capabilities.
- Consistently learned and applied new technologies to meet project demands.

SKILLS

- **Front-End:** HTML, CSS, JavaScript, React.js and Typescript.
- **Front-End Framework:** Bootstrap and Tailwind CSS.
- **State Management:** Context API and Redux Toolkit.
- **Back-End:** Node.js, Express.js, RESTful APIs and Authentication.
- **Databases:** SQL (MySQL, PostgreSQL) and NoSQL (MongoDB).
- **Version Control:** GitHub.
- **Full Stack Framework:** Next.js.

PROJECTS

- **Custom Content Management System (CMS):**
 - I developed a custom CMS application at my current organization using Next.js (A React.js Framework) to manage content for web applications.
 - The initial version I created supports content management for blogs, service pages, landing pages, and various types of web content, along with the capability to manage form data.

- **Qcentrio:**
 - I built a 50-page dynamic website for an AI company called Qcentrio using Next.js, a React.js framework.
 - I managed all the content and forms for this site through the CMS application i previously developed.
- **NexGen UI:**
 - Nexgen UI is a React UI library which I built with TypeScript. The library features animated UI elements such as carousels, cards, modals, pricing tables and lot more, all of which can be seamlessly integrated into any React or Next.js project by simply copying and pasting the code.
- **Pixel Fit:**
 - "ThePixelFit" is another project of mine built with python, designed for fun. It generates images by embedding custom messages, with each pixel representing a letter from the provided message. Users can upload an image and specify the message they want to embed."
- **Additional Projects:**
 - At my organization, I also built a single-page website for a Dubai-based grocery company called Memuvo.
 - Additionally, I had the opportunity to work with WordPress while developing our organization's website.
